Consumers' information needs

- Fish market very diverse and complex from a consumers' point of view
- Consumers need information in order to make decisions in line with their preferences
- Different options: e.g., labels on products, online provided information

Thünen-Institute

Analysis of...

- consumers' information needs about sustainability in seafood
- the importance of sustainability labels
- the use of online sources related to fish
- the content consumers are looking for online

Recommendations for online communication of (sustainable) seafood

What we have done

- 19 focus groups in 6 European countries (France, Germany, Iceland, Italy, Poland, UK)
- Online survey in 8 European countries (Finland, France, Germany, Ireland, Italy, Poland, Spain, UK) with 4100 fish consumers
- Face-to-face interviews with fish consumers in Germany focusing on the use of two fish information websites (one state-run website and one hosted by stakeholders of the fish sector)

Focus groups - Consumers' information needs

- Italy and France: General need to improve information provision
- Germany and UK: No need for additional information at the point of sale → information overload
- Iceland: Low use of additional information
- Poland: High price sensitivity → less expressed information needs

Focus groups – Perception of sustainability labels

- Generally appreciated
- But label skepticism in all countries, particularly in Poland
- Icelanders had no need for sustainability labels on domestic seafood

Focus groups – Perception of online offers

- Generally appreciated
- Doubts of actual use in shopping situation
- In Iceland, Italy and Germany particularly appreciated by younger consumers
- Germans expected web offers for each sustainability standard

Bente Stachowske / Greenpeace

Survey - Importance of internet and labels – Country differences

Which of the following are the most important sources of information to you with respect to fish?

Survey - Topics of interest online

And for which kind of information are you mainly looking for in the internet?

Survey - Preferences for different online sources – by country

Offers of...

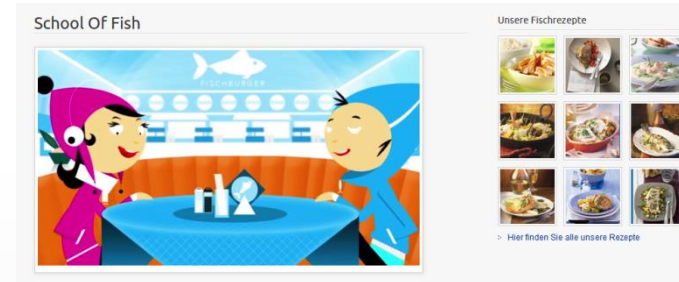

- consumer organizations
- producers
- NGOs
- government and EU
- producers in social media

Please tick the online information sources you use the most.

Interviews - Important topics and design

- Topics:
 - Practical advise – recipes
 - Information about existing labelling schemes
 - Complex information also welcomed
- Design:
 - Search tool
 - Videos and pictures → story telling

Fischinfo.de

Lessons to learn for consumer communication

- In most countries web offers of producers are one of the most used sources
 - Even though information is not always used it has to be present on the product and online
 - Web offers become a must-have

Content of online communication

- Practical advice – in particular recipes are appreciated by consumers in all countries
- Sustainability topics addressed should consider cultural differences
 - E.g., DE, IT and PL higher interest in animal welfare issues
- Complex and in-depth information should be available
- Visual content very important → story telling through videos and pictures can increase trust

Thanks!
